Dear Resident / Property Owner:

Re: Water Main and Lead Service Lines Replacement Project

The replacement of older water mains and the service lines that deliver the water services into homes in Saskatoon's most established neighbourhoods is a priority for the City. In 2017, the City committed to removing all lead service lines by the end 2026.

During the 2020 construction season (May – October), the City will continue to replace water mains and lead service lines in various parts of the city, including in Caswell Hill (see enclosed map and note that it is subject to change).

The water main and lead service lines replacement project scheduled to occur in your neighbourhood next construction season will include the following infrastructure improvements:

- Replacement of 1230m of water main;
- Replacement of 152 lead water connections;
- Restoration of roadways, resulting in smooth, 'like new' road surfaces;
- Rehabilitation of sidewalks.

Over the next several months, the City will provide opportunities for residents to learn more about this important infrastructure project:

- For all residents who have lead service lines, a City representative will be in touch with you over the next couple of weeks to discuss the details and anticipated impacts of this work.
- In early 2020, an information session will be held in your neighbourhood where you will have an opportunity to learn more about the project and ask any questions you may have.
- Prior to construction beginning, you will receive a construction notice with important information about the project.

In the meantime, we ask that residents sign up to receive project updates which will be provided to residents prior to and during the project. To sign up, please email us at constructionupdates@saskatoon.ca and provide your name, address and contact information.

Sincerely,

Transportation & Construction Department
